t CONTENTS

CHAP.
PAGE
VIII. Influence of Incompleteness of Reactions . . 62
IX. Distillation Gas.....64
X. Producer Gas.....77
XI. Judgment of the Working of Producer from Analysis of the Gas.....SO
XII. Temperatures in the Producer 96
(a) The mass of incandescent bed in the producer . . 98 (5) Steam content of the producer gas 100
XIII. Change of the Composition of Producer Gas in Conduits and Regenerator Chambers 103
XIV. Air Requirement for Combustion of Gas in the Open-Hearth Furnace.....108
Air requirement for bad gas 110
XV. Temperatures and Transference of Heat in the Combustion Chamber of the Open-Hearth furnace . . .113
(a) Influence of the quality of the gas on utilisation of heat in the combustion chamber. . . .119
(b) Utilisation of heat in the regenerator chambers . 124
(c) Loss of heat in the waste gases in open-hearth furnace working..... 125
(d) Regulation of temperature in the combustion chamber 127
XVI. Gas and Air on their way through the Furnace System . 136
PART H
CHEMISTRY OF THE BASIC OPEN-HEARTH PROCESS
XVII. Reducing and Oxidising Processes 139
XVIII. The Chemical Action of the Flame..... 147
(a) Formation of scale..... 147
(&) Formation of slag..... 148
(c) Slag-forming substances..... 152
(d) Metal and slag in the open-hearth furnace . . 154
(e) Removal of impurities from the iron and retention of their products of oxidisation in the slag. . 155
(1) Silicon..... 156
(2) Phosphorus..... 158
(3) Manganese..... 161
(4) Carbon..... 164
(5) Sulphur in the basic open-hearth furnace . 167
(6) Oxygen in iron . . . ... .171
